

## AMENDMENTS TO THE SPECIFICATION

Please replace page 13, lines 1-6 with the following:

A controller 108 for modulating the vibration frequency may be provided. FIG. 7 shows a possible configuration for the controller 108 and the electrical connections to and from the motors 38. The device may operate at a vibration frequency greater than about 90 Hz, and less than about 110 Hz to provide effective pain relief. A vibration frequency of about 100[[Å5]] Hz is desired.
